EDUCATION

Indira Gandhi Delhi Technical University for Women

B.Tech in Computer Science and Engineering | CGPA: 8.66/10

New Delhi, India

Aug. 2020 – May 2024

EXPERIENCE

Urban Company

Software Development Engineer I

Gurugram, India

Aug. 2024 – Present

AI Coach

- Built an AI-powered voice agent for real-time coaching conversations with service professionals; evaluated multiple LLM models on accuracy, context retention, and out-of-context handling to select the optimal model.
- Redesigned the system from a continuous voice-streaming model to a speech-to-text pipeline; implemented context clearance to prevent token accumulation across long conversations, iterating through **8 cost-optimisation approaches** to achieve a **93% reduction** in per-call cost (\$5.50 → \$0.35).
- *Tech: GPT Realtime API, GPT-4o mini, GPT-5, ElevenLabs TTS*

Late Show Resolution Bot

- Built a customer-facing conversational agent that proactively handles service delays in real time; monitors live **location tracking** to detect ETA changes and notifies customers with contextual resolution options — wait, reschedule, cancel, or escalate for a refund.
- Integrated an **AI voicebot** that autonomously calls the service professional when ETA does not improve, captures intent and estimated arrival in real time, and relays the outcome back to the customer; improved **customer satisfaction score from 60% to 67%**.
- *Tech: In-house voicebot on GPT models, Socket.IO*

Partner Job Listing

- Built a job listing page for the simplified app version used by service partners; the feature is actively used by **25% of the provider base**.
- *Tech: Node.js, Orion (UC's backend-driven frontend framework)*

Customer Support Conversational Agent

- Built a conversational agent for customer support in cleaning subscriptions, handling end-to-end use cases including refunds and subscription cancellations; improved **customer satisfaction rate by 10%** in the cleaning category.
- *Tech: In-house voicebot on GPT models, Socket.IO*

Check-In System

- Drove **entity modelling and low-level design** to extend a partner-trainer-only meeting system into an agnostic platform supporting scheduling, tracking, feedback collection, and 1:1 or batch session orchestration across partner–partner, partner–manager, and mentorship setups.
- Enabled config-driven auto-scheduling for diverse use cases such as batched trainings and provider–provider mentorship, alongside manual meeting setup for 1:1 interactions — all on the existing tech stack.

Urban Company

Software Development Engineer – Intern

Gurugram, India

Jan. 2024 – Jul. 2024

Training Configuration Manager

- Designed a **Resolver** entity as a config abstraction layer that maps training parameters to business concepts, decoupling course setup from code; involved end-to-end **entity modelling and low-level design**.
- Built **2 React-based dashboards** on top of the Resolver — one for course configuration and management, and one for scheduling and conducting training sessions — across **50+ service categories**.
- *Tech: React, Node.js*

TECHNICAL SKILLS

Languages: TypeScript, C++

Frameworks & Libraries: Node.js, React

Databases: MySQL, MongoDB

Tools & APIs: REST APIs, Git, Voice Streaming APIs, Zoom SDK

ACHIEVEMENTS

Urban Company GenAI Hackathon 2025 — winning team for creating an appliance diagnostic concierge bot

Rookie Rockstar 2024 — awarded for remarkable performance among early-tenure engineers at Urban Company

Avery Dennison Foundation InvEnt Scholarship 2021 — one of **10 recipients** across India

JPMC Code for Good Hackathon 2022 — Top 10 teams

Flipkart Girls Wanna Code 4.0 Mentee — one of **200 qualifiers** from 10,000+ applicants

Global Rank 421, Quora Programming Challenge 2022
